### **DETAILED ACTION**

#### Information Disclosure Statement

All references submitted in the information disclosure statement have been considered by the examiner.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6, 9-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson et al (US 2003/0103735 A1).

Anderson et al reference discloses an optical device with all the limitations set forth in the claims, except it does not teach the axis of transmission from an optical source being perpendicular to the axis of plug insertion. Never the less, Anderson et al reference does disclose: optical plug and receptacle (Fig. 2); disposing an optical source and a receiver on a side wall of the receptacle with the axis of transmission from the optical source to the receiver directed into and across a plug space (Fig. 3A); interlocking the connection between the plug and the optical source when the detector received the signal from the optical source (Fig. 4, abstract); the optical source being a light emitting diode, and the receiver being a photodiode.

Application/Control Number: 10/037,507

Art Unit: 2874

However, disposing the optical sources and receivers such that the axis of transmission from the optical source is perpendicular to the plug insertion axis, is well known and commonly used in the optical module art. Such an arrangement allows for better optical alignment between the optical source and the fiber connectors with the use of alignment lens or mirrors. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Anderson et al device to have optical source and receiver disposed such that their axis of transmission is perpendicular to the axis of plug insertion.

### Allowable Subject Matter

Claims 7-8 and 15-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: an optical interlock device for shutting off the optical source when an optical connector plug is absent from the receptacle is known and taught in the prior art. For example, Peterson et al (US 5,113,467) disclose a magnetic sensor for detecting the presence of a fiber optic plug from the receptacle. Barath et al (US 4,589,404) disclose electrical sensor for detecting the presence of fiber optic connector from the light source receptacle.

However, none of the prior art fairly teaches or suggests such an optical interlock device utilizing optical emitter and detector, such that interruption of light signal from the

Application/Control Number: 10/037,507

Art Unit: 2874

light source disposed on the side wall of the receptacle to the receiver disposed on the same side wall of the receptacle activates the optical interlock which disconnects the transmission of light between the light transmitter and optical plug, as claimed in the instant application.

#### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sung H. Pak whose telephone number is (703) 308-4880. The examiner can normally be reached on Monday - Thursday: 6:30am-5:00pm.

The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7724 for regular communications and (703) 308-7724 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
